

 SOFTWARE DEVELOPMENT

Built around your business.

Custom software, connected operations and practical AI.
Designed, developed and supported by Worktechlabs.

.NET / ERP / APPLIED AI

A development partner. From first sketch to daily use.

We turn the way your business works into software your people can rely on. Our focus is custom business systems, built on Microsoft technology and supported as your needs evolve.

SOFTWARE FOR EVERYDAY WORK

Understand the operation

We start with the people, decisions and routines behind the work. The brief grows from a clear understanding of what needs to improve.

Build with your team

Direct access to the engineers, working software to review and clear decisions at each stage keep the project grounded in everyday use.

Stay involved

Launch is part of the journey. We maintain, support and improve the system as the business changes.

The right expertise for the whole system.

From a new platform to the next chapter of an existing one.

-
- | | | |
|----|---|--|
| 01 | ERP software | Connect day-to-day operations with a system shaped around your processes, people and reporting needs. |
| 02 | Applied AI | Extract information, classify incoming work and automate defined tasks, with evaluation and human oversight. |
| 03 | .NET development | Build web applications, APIs and cloud services on .NET, Blazor and Azure, with a maintainable foundation. |
| 04 | Legacy modernisation | Move ageing applications forward in manageable stages, preserving the business knowledge they contain. |
| 05 | Integration & data migration | Connect applications and move historical records with validation, reconciliation and clear ownership. |
| 06 | Support & managed services | Keep production systems dependable with ongoing maintenance, technical support and planned improvements. |
| 07 | Outsourcing & technical review | Extend your development team with engineering capacity, independent code review and useful documentation. |
-

One operation. A connected view.

Bring the work, the records and the decisions together. A custom ERP gives each team the tools it needs while keeping the whole business connected.

CONNECTED OPERATIONS / CONCEPT VISUAL

Stock & production

Inventory, work orders and traceability across the operation.

Sales & invoicing

Move from enquiry and quotation to delivery and invoice.

Reporting & insight

Give management a clear view of the information that matters.

Purchasing & suppliers

Requests, approvals and purchasing in a shared workflow.

Membership & subscriptions

Manage renewals, fees, member records and communications.

Roles & permissions

Give each person access appropriate to their responsibilities.

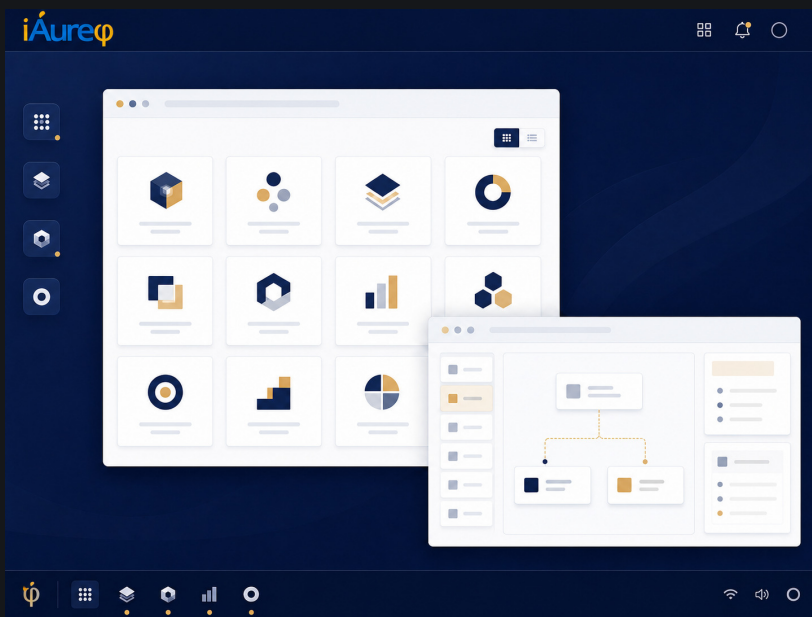

AI that helps the work move.

Put AI to work on a defined business problem. We connect it to your systems, evaluate it against your data and build in the review steps the process needs.

OUR OWN PLATFORM

iAureo Agents Platform

A platform for document processing and workflow automation, with explicit tools, permissions and a record of what each agent does.

PLATFORM VISUAL FROM OUR PORTFOLIO

Controlled access

Tools and data access scoped to the task and the user.

Human review

Review thresholds and approvals for actions that need judgement.

Traceable execution

A record of sources, prompts and decisions for inspection.

Extract

Turn documents into structured business records.

Classify

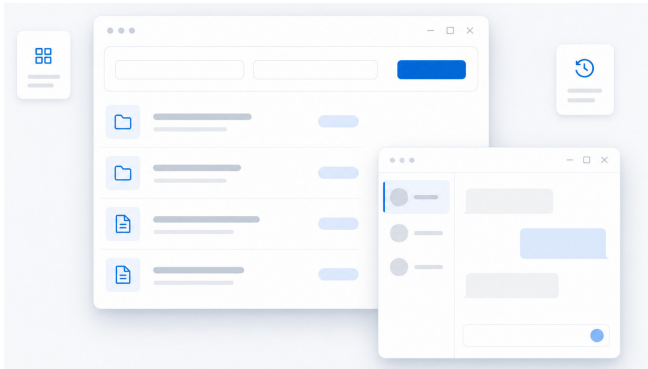

Sort incoming information and route it to the right place.

Automate

Connect approved steps across a business workflow.

Different businesses. Purpose-built systems.

A selection of the work behind our capabilities.

ERP / OPERATIONS

Maspernet

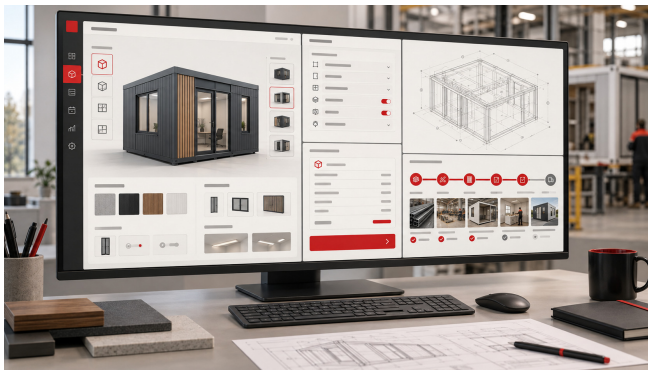

A shared platform for quotations, job tracking, delivery and invoicing, with management reporting across departments.

MEMBERSHIP / SPORT

Cookham Reach Sailing Club

Membership, subscriptions, boats, berths and duty rosters in one system for the club's volunteers.

CONFIGURATION / MANUFACTURING

FG Speed Cabins

A rules-based configurator linking valid product specifications and automatic pricing to production tracking.

BOOKINGS / CLIENT MANAGEMENT

Depuración Corporal

Online booking, client records and content management in one platform, with a back office the practice can update itself.

Project visualisations from our portfolio. Explore more at worktechlabs.com/case-studies.

Clear steps. Shared progress.

A practical route from the first conversation to software in everyday use.

01 Understand the work

We map the current process, the friction and the people involved, then agree what a useful outcome looks like.

02 Define the scope

We set out the deliverables, priorities, responsibilities and commercial terms before development begins.

03 Build and review

Your team sees working software in regular releases. Feedback helps us refine the system while it is taking shape.

04 Prepare for launch

We test workflows, validate migrated data and help users get ready for a planned move into production.

05 Support and improve

We stay close to the system, resolve issues and plan the next improvements around how it is actually used.

An extension of your engineering team

We also work alongside existing teams: adding development capacity, reviewing code and documenting systems within your working practices.

Let's make work flow.

Tell us what is slowing the business down, what needs to connect or what you want to build next. We can help you shape the next step.
